PROFESSIONAL PROFILE

Business systems and software development professional who translates operational workflows into secure, integrated digital solutions. Experienced in ERP architecture, full-stack web development, PostgreSQL database design, REST APIs, business reporting, data analysis, and process automation. Combines business-process understanding with practical engineering to build systems that improve accuracy, traceability, efficiency, and management decision-making.

CORE VALUE PROPOSITION

- Design integrated business systems that replace disconnected spreadsheets, repetitive manual work, and unreliable reporting.
- Translate real-world processes into clear data models, application rules, controls, dashboards, and decision-support workflows.
- Develop accessible, responsive websites and digital platforms that support service delivery, communication, and lead generation.
- Use data analysis, machine learning, and automation to identify patterns, validate information, and improve operational decisions.

TECHNICAL SKILLS

Software & Web Development	React, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Vite, Node.js, Express.js
Databases & APIs	PostgreSQL, SQL, schema design, views, migrations, REST APIs, JWT authentication, RBAC
Data, ML & Automation	Python, pandas, NumPy, Matplotlib, Seaborn, scikit-learn, EDA, data validation, workflow automation
ERP & Business Systems	Inventory, procurement, sales, finance, reporting, audit trails, process analysis, data integrity
Tools & Deployment	Git, GitHub, Postman, Sanity CMS, Brevo, Cloudflare Pages, Advanced Excel, Windows services

KEY ACHIEVEMENTS

- Architected and developed KAM GRAINS ERP, integrating procurement, inventory, sales, finance, reporting, role-based access, audit trails, and FIFO costing within one controlled platform.
- Developed the MedLink VA website and digital service platform with responsive pages, Sanity CMS content workflows, lead-generation forms, email integration, SEO foundations, and automated certificate PDFs with unique serial numbers.
- Designed PostgreSQL schemas, reporting views, APIs, validation controls, and reconciliation logic that strengthen data integrity and management reporting.
- Built analytics, machine-learning, and automation solutions for sales analysis, customer segmentation, forecasting experiments, stock and expiry monitoring, and automated operational alerts.

PROFESSIONAL EXPERIENCE

Full-Stack Developer & Business Systems Engineer | Hama Techservices | Self-Employed | *October 2024–Present*

- Design and develop business applications, websites, databases, APIs, reporting workflows, and automation tools for operational and service-based organizations.
- Translate stakeholder requirements into process maps, data models, system controls, responsive interfaces, and maintainable technical solutions.
- Build with React, TypeScript, Node.js, Express.js, PostgreSQL, Python, REST APIs, Git, cloud deployment, and content-management integrations.
- Selected engagements include KAM GRAINS ERP, the MedLink VA website, LeadBridgeAI, ERP analytics and machine-learning work, and Python-based business automation tools.

Warehouse & Data Operations Assistant | Joint Medical Store | *October 2019–July 2025*

- Supported receiving, storage, inventory control, order preparation, dispatch, and documentation for medical commodities in a regulated warehouse environment.
- Maintained accurate stock records and used operational data to support reconciliations, traceability, reporting, and timely issue resolution.
- Contributed to stock counts, expiry monitoring, transaction verification, and process improvements that strengthened accuracy and accountability.
- Collaborated across warehouse, procurement, finance, and distribution teams to resolve discrepancies and maintain continuity of service.

PROJECTS

KAM GRAINS ERP — *Integrated Business Management Platform*

- Developed a full-stack ERP covering procurement, inventory, sales, deliveries, expenses, payments, finance, reporting, audit trails, and role-based access.
- Implemented PostgreSQL business logic, FIFO costing, period controls, data validation, traceability, and dashboards for reliable operational and financial reporting.

MedLink VA — *Healthcare Virtual Assistant and Training Platform*

- Built a responsive service website using React, TypeScript, Vite, and Tailwind CSS, with pages for services, classes, jobs, resources, testimonials, FAQs, and team information.
- Integrated Sanity CMS, Brevo email and lead workflows, Cloudflare Pages deployment, SEO features, and branded certificate generation with unique serial numbers.

Data Analytics, Machine Learning & Automation

- Cleaned, validated, analyzed, and visualized operational and public datasets using Python, pandas, NumPy, SQL, PostgreSQL, Matplotlib, and Seaborn.
- Applied regression, classification, ensemble modelling, customer segmentation, forecasting, and anomaly analysis; automated stock, expiry, overstayed-item, and reporting alerts.

LeadBridgeAI — *Human-in-the-Loop Lead Engagement Assistant*

- Prototyped an AI-assisted, multi-channel lead workflow with approval controls, structured evaluation cases, and safeguards for reliable customer communication.

EDUCATION

Bachelor of Arts in Development Economics — Makerere University

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Data Analysis with Python: pandas, NumPy, Matplotlib, Seaborn, SQL, and exploratory data analysis
- Machine Learning: ongoing applied learning in scikit-learn, regression, classification, model evaluation, and ensemble methods
- Full-Stack Development, PostgreSQL Database Design, REST APIs, Git/GitHub, and business-process automation
